

Cervical cancer accounts for **3.1% (604 127 new cases)** of the global cancer incidence and **3.3% (341 831 deaths)** of the global cancer mortality (Source: GLOBOCAN 2020).

This fact sheet presents the screening protocol, number of women screened and performance indicators according to the most up-to-date information received from **77 countries**.

The year of data collection may differ across the countries.

Reporting year	Screening test	Screening interval (years)	Age group	Number screened	Examination coverage (%)	Primary test positivity (%)	Further assessment participation rate (%)	Detection rate of CIN2+ (/1,000)	PPV of further assessment to detect CIN 2+ (%)	Treatment rate (%)

Legend:

HPV: human papillomavirus test; VIA: Visual inspection with acetic acid; * Screen-and-treat protocol

[#] Target population is not the total of age eligible individuals for screening (sub-national), the project in Guyana is at the phase of rolling-out. [†] It might be slightly over estimated, because some participants outside of the screening programme were screened. [^] It might be slightly over estimated, because some participants outside of the screening programme were screened. [~] only for CIN3+. [‡] Women with a previous diagnosis of cancer prior to the examination date were excluded from this screened-related data. ^{**} Colposcopy substantially part of screening primary visit
